SAVE THE DATE: May 11-12, 2026
Place: Virtual
Price: $150 Members (ISACA/IIA) - $175 Non-members
CPE: 16

The **11th Chicago Chapter IIA/ISACA Hacking Conference** virtual event is scheduled for May 11-12th, 2026. The premier event for information security, risk management, and audit professionals to enhance their knowledge of the critical cybersecurity risk topics such as: Information Security Practices, Controls, and Cybersecurity risks. Attendees will earn 16 NASBA-certified CPE credits and gain practical knowledge to help protect their organizations from the latest cybersecurity threats. Building on the themes of attack vs defense, adopt the philosophy of Cobra Kai (Attack) and Miyagi-Do (Defense) when protecting your organization from threat actors that range from hacktivists to nation state actors with nearly unlimited resources.

Learn about a plethora of Cybersecurity topics such as: AI Security, Information Security strategy, breach preparation/response, as well as our highest rated talk, the CISO panel, to get straight answers of what security concerns really worry the CISO at some of the largest organizations in

Chicago. This year we are proud to present a new event: a two hour interactive session with hands-on work in small groups looking at realistic data to find suspicious activity. Practice searching for attack patterns to bring real world skills back to your organization's risk groups.

Co-Chairs:
Corbin Del Carlo & Jason Torres
